Vontas OnCall
Voice AI Platform for Public Transit

Push-to-Talk and Voice AI Bots for Transit to Optimize Driver, Dispatcher, and Fleet Operations

Efficient and effective team communication is critical to safe and successful public transportation operations. Traditional radios are antiquated and overly complex, with inconsistent connectivity, poor audio quality, and a steep price tag. Standard phone calls (cellular or VoIP) are not secure, offer limited functionality, and are unable to scale across a dynamic frontline public transportation operation. Text messaging is dangerous and illegal to use while driving.

Overview

Vontas OnCall (formerly Orion) for Public Transit is a new and innovative approach to communication and frontline operations.

Rapid and easy deployment using modern cloud architecture.

Seamless transition from current technology.

Voice-activated process automation at the point of work. Vontas OnCall's Voice AI Bots are unique and unavailable with traditional solutions.

Real-time communication, collaboration, and location management critical to Public Transit.

Vontas OnCall has made it easy to get started today in modernizing how "voice" can transform your frontline operations with the "Quick-Start Bundle".

The power of OnCall's platform for Public Transit includes real-time, push-to-talk communication, operations console for dispatch, powerful Voice AI capabilities for process automation, and all the necessary hardware and services.

Software
