

Vontas OnCall Push-to-Talk 2.0

Connect Your Frontline Enterprise
with Voice AI.

Vontas OnCall (formerly Orion) PTT 2.0 and Voice AI platform is a cloud-based communication and voice automation solution that radically modernizes frontline work. There are four features that separate OnCall's PTT 2.0 platform from other PTT solutions and take frontline communications into the future:

Overview

Voice AI Workflows

- Provide value-added services like real-time translation and transcription
- Voice-automate routine work to make frontline teams more productive
- React faster and more accurately in critical situations such as an emergency
- Amplify team member knowledge by connecting them with corporate systems, knowledge bases, and third-party services to provide real-time intelligence

Integrations with Third-Party Services

- Connect to third-party services, data stores, and back-end systems in real time
- Provide integration and voice-activation to operational applications such as property, task, incident, and workforce management; routing; and situational awareness solutions
- Employ APIs and a software development kit (SDK) to leverage OnCall's Voice and Location abstraction layers
- Write new integrations and utilize existing integrations with leading service providers, including IBM Watson, Microsoft, Twilio, Mapbox, HERE, ESRI, and ATAK

End-to-End Encryption

- End-to-end encrypted (E2EE) at AES256 level with ephemeral keys
- Certified to the FIPS 140-2, NSA Suite B cipher
- Equipped to protect your proprietary and sensitive information, communications, and — most important — your workers
- Developed hand-in-hand with the Intelligence Community and used in active field missions today

Secure Cloud Deployment

- Deploy in-cloud, on-premise, or air-gapped
- Support your security and corporate governance requirements
- Scale your communication quickly with minimal friction
- Configure integrations, maintenance, and control policies to fit your business needs

PTT 2.0 radically modernizes your frontline operations and helps you create a more connected and more productive workforce.

Communication Over

- Any Distance
- Any Network
- Any Device

Multimedia Collaboration

- Voice
- Text
- Photos
- Files
- Videos
